

CemenTech KA

Increases initial compressive strength and facilitates grinding

DESCRIPTION

CemenTech KA Series cement additives are designed for the cement industry where they increase the strength at initial pressing and facilitate grinding. Additives that facilitate grinding generally increase the yield of the mill and the flow of cement.

FIELD OF APPLICATION

- CemenTech KA, reduces electrical attraction by which it prevents the aggregation and formation of large grains and increases the degree of hydration of the cement.

ADVANTAGES

- The amount of ground cement increases at the exit of the mill.
- Cementation of cement increases up to 12% and reduces the cost of grinding.

USE

The rate of use of the additive varies between 0.04% and 0.15% per ton. Before determining the amount it is preferable to do laboratory experiments.

COMPATIBILITY

CemenTech KA series cement additives by means of a calibrated dosing system are ready for use.

STORAGE CONDITIONS AND PACKAGING

The product should be stored above 5 ° C. If the product is frozen, it should be mixed mechanically after thawing.

Sold in quantities of 1100kg

SAFETY INFORMATION

The additive must be kept away from the skin and eyes. In case of any contact, it must be washed with water. When contacted with eyes one must immediately rinse it with water and medical support must be taken. Protective goggles / gloves / mask should be used during the usage of the admixture.

The Material Safety Data Sheet (MSDS) should be read for detailed information.
